PROFESSIONAL SUMMARY

Data-focused MCA graduate with internship experience building **SQL-driven analytical** solutions and **Python ETL pipelines**. Reduced reporting effort by 30% and processed 50,000+ records through automated data workflows. Strong in **Query Optimization**, **Stored Procedures**, and **Actively upskilling in SSIS and Azure Data fundamentals**.

TECHNICAL SKILLS

- **Languages & Databases:** Python, SQL (PostgreSQL, MySQL), Microsoft SQL Server.
- **SQL Expertise:** Joins, CTEs, Window Functions, Stored Procedures, Indexing, Query Optimization, Subqueries.
- **Data Engineering:** ETL Pipeline, Data Ingestion, Data Transformation, Data Modeling, Data Validation, Data Quality, SSIS (Learning), REST API Integration.
- **Python Libraries:** Pandas, NumPy (ETL, Data Preprocessing, Automation).
- **BI & Reporting:** Power BI, Power Query, KPI Dashboards, Data Visualization.
- **Tools & Practices:** GitHub, VS Code, Agile Methodology, Documentation.

PROFESSIONAL EXPERIENCE

Data Analytics Intern

Labmentix Edtech – Bangalore | Apr 2025 – Oct 2025

- Engineered Python-based ETL data pipelines to extract, clean, and consolidate data from 3+ source systems into SQL Server, cutting data preparation time by 40% and improving pipeline reliability.
- Wrote optimized SQL queries including complex joins, CTEs, window functions, and stored procedures to power business intelligence reporting.
- Automated 3 recurring Power BI dashboards using DAX and Power Query, eliminating 30% of manual reporting effort and enabling self-serve access to real-time KPIs.
- Implemented and enforced data validation and quality check frameworks across datasets - identifying and resolving data inconsistencies before delivery, maintaining 99%+ data accuracy for business reporting.

PROJECTS

OLA Ride Data Pipeline & Analytics Platform

Python, SQL Server, Power BI, Streamlit, RestAPI

- Architected and deployed an **end-to-end ETL data pipeline** ingesting real-time ride data via REST APIs — automating extraction, transformation, and loading into a **SQL Server database**, eliminating 100% of manual data collection.
- Designed a **Schema dimensional model** in SQL Server with fact and dimension tables - enabling complex analytical queries on 5M+ ride records covering volume trends, fare analysis, and peak demand patterns.
- Built **5 interactive Power BI dashboards** tracking 10+ KPIs (ride volume, revenue, demand) reducing insight generation time from hours to minutes for business.

Airbnb Listing Analytics & Price Insights

Python, SQL, Power BI

- Engineered a structured **data warehouse** from 50,000+ raw Airbnb listing records - cleaning, normalizing, and transforming data using Python (Pandas) to enable reliable pricing and occupancy analysis.
- Wrote **performance-tuned SQL queries** using window functions, CTEs, and subqueries to uncover pricing patterns - identifying that commanded a **23% premium** over average listings, enabling revenue optimization decisions.
- Delivered a **Power BI report** with dynamic slicers across location, property type, and rating - providing actionable business insights for pricing strategy.

EDUCATION

Master of Computer Applications (MCA) - T. John College, Bangalore | 2023 – 2025 | Aggregate: 8.1 CGPA

Coursework: Data Analytics, Database Management, Data Structures, Python Programming, Computer Science Fundamentals

Bachelor of Computer Applications (BCA) - R.K. University, Rajkot | 2020 – 2023 | Aggregate: 7.1 CGPA

Coursework: Database Management, Programming Languages, Computer Science Fundamentals
