PROFESSIONAL SUMMARY

Former freelance backend developer, currently undergoing intensive, specialized training in the SAP ABAP RESTful Application Programming Model (RAP), SAP Fiori, and SAP Business Technology Platform (BTP). Leverages previous freelance experience in building scalable backend architectures to accelerate the mastery of Core Data Services (CDS), OData services, and extending S/4 HANA applications for both cloud and on-premise environments. Actively seeking a role to contribute to SAP implementations and continuous enterprise transformation.

TECHNICAL SKILLS

- **SAP Core:** SAP ABAP RESTful Application Programming Model (RAP), SAP Fiori Elements, SAP Business Technology Platform (BTP).
- **Data Modeling & Services:** Core Data Services (CDS) Views, Virtual Data Models (VDM), OData Services.
- **Development Tools:** SAP Business Application Studio (BAS), ABAP Development Tools (ADT).
- **Extensions:** S/4 HANA Standard Fiori App Extensions, Side-by-Side Extensions.

SAP TRAINING

SAP BTP, ABAP RAP & Fiori Technical Trainee

Emax Technologies

Present

Hyderabad

- Developing SAP Fiori List Report Apps from scratch.
- Architecting database models using ABAP CDS Views, incorporating Virtual Data Models (VDM), complex joins, and defining the cardinality of associations.
- Implementing both Managed and Unmanaged Business Object Behaviors, utilizing Entity Manipulation Language (EML) to execute robust CRUD operations and handle errors.
- Consuming external APIs utilizing Side-by-Side Extensions and managing attachment uploads within the ABAP RAP framework.
- Building, debugging, and deploying enterprise-ready Fiori web applications directly on the SAP Cloud Platform (BTP) utilizing SAP Business Application Studio.

WORK EXPERIENCE

Freelance Software Developer (Automation)

Client (confidential) – Precision Manufacturing

Jan 2026 – Aug 2026

Remote (Contractual)

- Built an offline Windows desktop application automating extraction of product parameters and specifications (dimensions, tolerances, GD&T) and metadata from engineering drawings, replacing error-prone manual OCR workflows.
- Designed a non-destructive spatial-text pipeline parsing hybrid PDFs (vector + pixel data) using Tesseract OCR, OpenCV, and PyMuPDF morphological masking to isolate manufacturing geometry.
- Built a custom regex-based validation gatekeeper for complex tolerance/dimension formats, plus an auto-ballooning and Excel export engine for audit-ready inspection reports.
- Implemented a Backup & Disaster Recovery service using an atomic-save pattern with rolling snapshots, ensuring zero data loss in a fully air-gapped offline environment.

EDUCATION

Master of Computer Applications (MCA)

T.John College (Autonomous) | 8.1 CGPA

Sep 2023 – Nov 2025

Bangalore, India

Coursework: Distributed Systems, Advanced Data Management, Machine Learning, Cloud Computing
